

10. React-JS HOL

Code:

App.js:

```
import './App.css';

import OfficeList from './OfficeList';

function App() {
  return (
    <div className="App">
      <OfficeList />
    </div>
  );
}

export default App;
```

OfficeList.js:

```
import React from 'react';
import './OfficeList.css';
import officeImg from './office.jpg'; // Make sure to place a sample image in src folder

const offices = [
  { Name: "DBS", Rent: 50000, Address: "Chennai" },
  { Name: "WeWork", Rent: 65000, Address: "Bangalore" },
  { Name: "SmartWorks", Rent: 45000, Address: "Hyderabad" }
];

function OfficeList() {
  return (
    <div>
      <h1>Office Space, at Affordable Range</h1>
      {offices.map((item, index) => {
        const rentClass = item.Rent <= 60000 ? 'textRed' : 'textGreen';
        return (
          <div key={index} className="office-card">
            <img src={officeImg} alt="Office Space" width="25%" height="25%" />

```

```
      <h2>Name: {item.Name}</h2>
      <h3 className={rentClass}>Rent: Rs. {item.Rent}</h3>
      <h3>Address: {item.Address}</h3>
    </div>
  );
  }}}
</div>
);
}
export default OfficeList;
```

OfficeList.css:

```
.office-card {
  border: 1px solid #ccc;
  padding: 15px;
  margin: 10px;
  border-radius: 10px;
  width: fit-content;
}
.textRed {
  color: red;
}
.textGreen {
  color: green;
}
```

Output:
